

1. Will the town employees need to reside in a different database than the school employees?
2. For the monthly billing, do you need to differentiate the school employees from the town employees?

There are two physical payroll departments, one for the town and the other for the board. There is one instance of MUNIS with 3 entity codes, one for the town and two for the board. We need each payroll coordinator to interact with their data and have no access to the others data. They both process payroll at a separate time. However your software could handle that scenario is what we would do.
