

SUPPLEMENT Q & A
QUESTIONS AND ANSWERS
CONTRACT # 938
TOWN OF VERNON
MUNICIPAL GAIN PROJECT

1. Will the town pick up the cost of Police Details or should we calculate that into the proposal? **Calculate the cost of the Police Details into the proposal. The conduit entering the building is directly into the data center – less than 50’ internal length**

2. Will the vendors be provided with engineered drawings of the fiber path way? **Fiber Pathways, Registered Poles/Owners, Building Entrances and Pictures of Cabling on Poles have been posted on Vernon’s website under contract #938** (<http://www.vernon-ct.gov/legal.html>). **All Pole Engineering will be completed by AT&T, as the assigned Pole Administrator, and all Engineering Documentation provided by AT&T will be shared with the Vendors when completed.**

3. What is the internal length of the High School? **The internal cabling from the High School entry point (see picture in RFP) to the RHS data center is approximately 450’ (well beyond the 50’ internal length requirement). Please calculate the cost of this internal cabling into the proposal.**

4. The desired pathway from the Annex to the Police Dept. cannot be made without the placement of a utility pole at the intersection of East and West Main. Will the TOV place said pole or is it up to the contractor? **Since this is not a replacement of an existing utility pole, it will be the property of the TOV and this cost should be calculated into the proposal.**
