

RIVER STREET BRIDGE REPLACEMENT

Starting on Monday, November 30, 2009, construction is scheduled to begin on the River Street bridge replacement project. Since it will be located east of the existing bridge, the existing bridge will not be removed until the new bridge is in place. Although there will be no posted detour, construction equipment will be in the area, possibly causing minor delays. The contract time for this project will run till April 25, 2011. It should be noted that the detours in place for the Spring Street bridge replacement are still in effect and will be through July of 2010.
